

## About Intelletto Technologies Inc.

Intelletto was founded in 2003 by a team of software and hardware professionals in Ontario, Canada. Intelletto is committed to delivering best quality products to customers, partners and resellers through its unique product and service offerings, while closely synchronizing product development strategy towards the customers' needs and priorities-such as productivity, cost savings and return on investment.

## Executive Team

Chief Executive Officer: Hassanali Namazi  
VP of Business Development: Garry Wallace  
VP of Engineering: Reza Soudmand  
VP of Product Development : Homayoun Ahmadi

## Intelletto Products:

Our patent pending dual barcode/RFID reader platform integrates with virtually no effort into the existing applications driven by barcode and allows RFID and barcode to co-exist in the same environment. This way it allows the user to deploy RFID only in areas that provide the highest ROI and maintain barcode for areas where RFID functionality is not required.

- **RFID Multiport Family**  
This product family is designed for desktop foot and does not require any software to run on the client.  
<http://intelletto.com/Products/BROCHURE-INT101-SP.pdf>
- **RFID Linemaster Family**  
This product family allows duality of barcode and RFID in assembly line, conveyor belt and general industrial environments.

## RFID Technology:

Radio frequency identification (RFID) allows for non-contact, no line of sight reading and tracking of moving and stationary objects and in many ways is superior to barcode technology which is currently in wide range use in many business environments. RFID has already established itself in a wide range of markets including livestock identification and automated vehicle identification systems.

More on RFID can be found here:

## Industry News:

- **Wal-Mart Improves On-Shelf Availability Through the Use of Electronic Product Codes, October 14, 2005**  
BENTONVILLE, Ark. -- Wal-Mart customers found items they wanted in stock more often due to the retailer's use of electronic product codes (EPCs) powered by radio frequency identification (RFID) technology when compared to control stores. This is according to an independent University of Arkansas study's initial findings. [...] "This is no longer a take-it-on-faith initiative," said Linda Dillman, executive vice president and CIO for Wal-Mart. "This study provides conclusive evidence that EPCs increase how often we put products in the hands of customers who want to buy them, making it a win for shoppers, suppliers and retailers."
