Intelletto Releases Pioneering Bar-Code-to-RFID Solution for Retail Point-of-Sale and Supply Chain Management

Development Marks First Product in SkyeTek and Intelletto Partnership

Markham, Ontario October 27, 2004 – Intelletto Technologies Inc., a designer and manufacturer of RFID based appliances, and SkyeTek, developer and manufacturer of radio frequency identification (RFID) read/write modules, announce a partnership to develop and sell new RFID products for retail point-of-sale and supply chain management applications. Intelletto has already brought to the market a pioneering product, the RFID Multiport Companion, which allows barcode and RFID to co-exist in the same environment and allows a gradual migration path from barcode to RFID. Designed around SkyeTek's M1 Reader, RFID Multiport Companion makes full use of the four unique qualities of the M1 that SkyeTek calls TILT: it is Tagnostic ® (capable of reading any manufacturer's RFID tags), Inexpensive, Low Power and Tiny. The Multiport Companion is the flagship product in a new partnership between the two companies. This partnership will also allow Intelletto and SkyeTek to cooperate on joint projects that address additional market needs in the future.

“SkyeTek's RFID reader has a robust design from a hardware and software interface perspective and certainly has the advantage over the competition. Intelletto looks forward to developing more appliances based on SkyeTek readers.” said Reza Soudmand, Intelletto's Chairman of the board and Vice President of Engineering.

“Skyetek is extremely pleased to partner with Intelletto Technologies,” said Bob Overstreet, SkyeTek's COO. “The Intelletto RFID Multiport Companion answers the need for a product that will permit businesses to easily migrate from barcode to RFID, and there is a growing market demand for such a transition solution. ”

About Intelletto Technologies Inc. Intelletto Technologies designs, develops and manufactures RFID based appliances that minimize the need for software integration and modifications. Intelletto's product strategy is based on recognizing the challenges of RFID implementation and minimizing them. Its product line allows companies to increase their productivity and return on investment and empowers them to proceed with their RFID implementation using a gradual approach. Intelletto sums up its mission as follows: “to change the way people view RFID and to help them to draw the big picture

piece by piece.” Located in Markham, Ontario, Intelletto can be reached at (905) 943-4260 or www.intelletto.com

About SkyeTek, Inc. Privately held SkyeTek, Inc. is exclusively focused on providing advanced multi-protocol RFID reader technology in multiple frequencies. SkyeTek offers embeddable RFID readers that remove barriers to interoperability and TILT today’s market expectations. The technology is Tagnostic[®], Inexpensive, Low-Power, and Tiny. SkyeTek markets directly to OEM customers in targeted vertical markets with several high-volume licensing and private-label options available. SkyeTek is based in Boulder, Colorado and can be reached at 720-565-0441 or www.skyetek.com.

About RFID

Radio frequency identification (RFID) first appeared in tracking and access applications during the 1980s. RFID wireless AIDC systems allow for non-contact reading and are effective in manufacturing and other hostile environments where bar code labels can not survive. RFID systems have tags and readers. Tags are microchip based radios with built-in antennas, which already have shrunk to the size of postage stamps. They listen for a radio query from a reader and respond by transmitting their unique ID code. RFID is established in a wide range of markets including retail, healthcare, livestock identification and automated vehicle identification (AVI) systems because of its ability to register and record moving objects.
